

How to install UAR on Windows Mobile device

1. First, you must purchase and install a third-party application called StyleTap. StyleTap allows your WM device to run PalmOS applications. You can find more information and purchase at this website: <http://styletap.com/>
2. Now, you need to install UAR. Using your phone browser, go to www.ua2u.net.
3. Tap "Windows Mobile". (If you have not already set up StyleTap, instructions are repeated on this page.)
4. Tap "UAR 2010". If asked, install to your Device (as opposed to your memory card).
5. UAR will download to your phone. Open it.
6. You have only downloaded the application, not the event information. Go to the web update page inside UAR, and download anything in BOLD (roster, schedule, etc), and your school's preferences.

Note about Pocket PC's: Pocket PC's that run on Windows Mobile will technically work. However, you must be able to connect to a wireless internet source during an event. Most convention centers do not have wireless available.
