

NOTES ON THE 2011 TOTALS:

World Championships

1. Actual competition results were taken from the top 25 finishers in the 2007 and 2010 World Championships.
2. These results were then averaged.
3. As some years were more competitive, or had less competitors than others, the averages had some discrepancies (i.e., 22nd place had a higher total than 21st place). In order to counteract this problem, the 25 averages were taken and ordered from greatest to least.
4. If there are multiple placements with the same total, then a lifter who totals that result will be ranked at the highest placement. For example, if 10th-12th place is 250 kg, then a lifter who totals 250 kg in a qualifying competition will have a projected placement of 10th.
5. All results must be within 10% of each other. If there were two totals differing by more than 10%, then 10% was taken off the previous result. For example, if 1st place was 200 kg, and second was 170 kg, the projected 2nd place result was changed to 180 kg.
6. For averages that ended before 25th place, the next placements after the last average were taken down by 1 kg for each descending spot. For example, if 100 kg was the last average at 5th place, then 6th is 99 kg, 7th is 98 kg, and so on down to 25th.
7. Numbers in red are changes from totals that were posted in December 2010

WORLD CHAMPIONSHIPS

1st-25th Projected Placement
